N. B. This table shows how many minutes a clock or watch is, or ought to be, before or after the sun. For a good clock, that goes true, measures time equally, and the time shown by a good clock is therefore called *Equal Time*; but the sun does not measure time equally, being sometimes too fast and sometimes too slow; and the time shown by the sun is called *Apparent Time*, according to which all the times in the almanack are set down, and they must be increased or diminished by the numbers of this table, to bring them to clock time.

A Table for the Value of Annuities on Lives at 3, 4, and 5 per Cent.

Age.	5 per Cent.	4 per Cent.	3 per Cent.	Age.	5 per Cent.	4 per Cent.	3 per Cent.

N. B. In the first column of this table is contained the age of the person, from 11 to 60 years of age; and in the 2d, 3d, and 4th columns the number of years purchase to be paid down for an annuity during each life; or, in other words, those columns show the present value of an annuity of 1. for each life, according as money is supposed to bear interest at 5, 4, or 3 per Cent. And, therefore, in either way of considering it, we have these two rules:

I. To find how much must be paid for an annuity of 50l. during the life of a person of 20 years old, interest being at 4 per Cent.—Against 20 years, and under 4 per Cent. is 14.8, which multiplied by 50 gives 740l. the sum required.

II. To find how much a year for life a person can purchase for 1000l. he being 30 years old, and money at 4 per Cent.—Against 30 and under 4 per Cent. is 13.1, by which divide 1000, and you have 76.34, or 76l. 6s. 10d. nearly, for the annuity required.

JANUARY hath 31 Days.

Full Moon 5th day at 10 morning.
Last Quarter 13th day at 5 morning.
New Moon 20th day at 12 night.
First Quarter 27th day at 9 night.
